SUBJECT INDEX

Subject Index

Acetylcholinesterase
Cholinesterases preceding major tracts in vertebrate neurogenesis 415.
Actin
Myofibril assembly 447.
The functional importance of multiple actin isoforms 309.
Actin-binding proteins
From the structure to the function of villin, an actin-binding protein of the brush border 403.
Adhesion molecules
Cell adhesion molecules and ion pumps – do ion fluxes regulate neuronal migration? 287.
Ageing
Expression of human plasma protein genes in ageing transgenic mice 317.
Agrobacterium
Plant gene replacement – a natural approach 597.
The emerging structure of the *Agrobacterium* T-DNA transfer complex 103.
The biosynthetic potential of plant roots 7.
Alkaline phosphatase
From cell membrane to nucleotides. The phosphate regulon in *Escherichia coli* 371.
Amine acetylation
Phylogenetic distribution and function of arylalkylamine *N*-acetyltransferase 30.
Anthropod evolution
The fifth day of creation 303.
Antirrhinum
Pattern formation in plants and animals 607.
Arabidopsis
Pattern formation in plants and animals 607.
Axis development
Retinoic acid: The morphogen of the main body axis? 437.
Axon growth
Cholinesterases preceding major tracts in vertebrate neurogenesis 415.
Bacillus subtilis
A membrane receptor kinase that regulates development in *Bacillus subtilis* 387.
Bacterial conjugation
The emerging structure of the *Agrobacterium* T-DNA transfer complex 103.
Bacteriophage genetics
Cloning with ϕ80lac: The French connection 503.
Base pairing
Mismatch repair in mammalian cells 473.
β-lactam antibiotics
Selective reminiscences of β-lactam antibiotics. Early research on penicillin and cephalosporins 601.
Brain development
Cholinesterases preceding major tracts in vertebrate neurogenesis 415.
S100 protein and Down Syndrome 381.
Caenorhabditis elegans
Genetic control of cell communication in *C. elegans* development 265.
The regulation of DNA repair during development 74.
X-linked gene expression and sex determination in *Caenorhabditis elegans* 513.
Calcium storage
The endoplasmic reticulum and calcium storage 527.
Calmodulin
Calmodulin-dependent protein kinase II 27.
Genetic dissection of Ca^{2+}-dependent ion channel function in *Paramecium* 273.
Calreticulin
The endoplasmic reticulum and calcium storage 527.
Cancer
DNA topoisomerase dysfunction: a new goal for antitumor therapy 167.
Integrins and tumor invasion 583.
The role of recombinational hotspots in genome instability in mammalian cells 577.
Unbalanced transmethylation and the perturbation of the differentiated state leading to cancer 163.
Carbohydrate antigens
Molecular changes in carbohydrate antigens associated with cancer 223.
Catecholamine metabolism
Phylogenetic distribution and function of arylalkylamine *N*-acetyltransferase 30.
Ca^{2+}-dependent ion channels
Genetic dissection of Ca^{2+}-dependent ion channel function in *Paramecium* 273.
cdc2
Yeast as a model system for understanding the control of DNA replication in eukaryotes 457.
Cell adhesion molecules
Cell–cell adhesion molecules in *Dictyostelium* 357.
Traction and the formation of mesenchymal condensations *in vivo* 389.
Two-way signalling through LFA-1 lymphocyte adhesion receptors 421.
Cell cycle control
S100 protein and Down Syndrome 381.
Yeast as a model system for understanding the control of DNA replication in eukaryotes 457.
Cell fusion
The discovery (or rediscovery?) of the phenomenon of premature chromosome condensation 193.
Cell membrane proteins
From cell membrane to nucleotides. The phosphate regulon in *Escherichia coli* 371.
Cell membranes
Membranes and microfilaments: Interactions and role in cellular dynamics 90.
Cell motility
The sea urchin spermatozoon 449.
Cell polarity
Cell polarity and development of the first epithelium 67.
Pattern formation in plants and animals 607.
Cell–cell interactions
Determination of cell fate in sea urchin embryos 115.
Genetic control of cell communication in *C. elegans* development 265.
Integrins and tumor invasion 583.
Pattern formation in plants and animals 607.

Central nervous system (CNS)
The cellular and molecular events of central nervous system remyelination 569.
Cephalosporins
Selective reminiscences of β-lactam antibiotics. Early research on penicillin and cephalosporins 601.
C-*fos*
Proto-oncogenes in cell differentiation 22.
Chemotherapy
DNA topoisomerase dysfunction: a new goal for antitumor therapy 167.
Cholinesterases
Cholinesterases preceding major tracts in vertebrate neurogenesis 415.
Chromatid segregation
Chromosome reproduction: Units of DNA for segregation 289.
Chromatin
Chromosome structure at interfaces between major chromatin types: alpha- and beta-heterochromatin 1.
Chromosome structure
Chromosome reproduction: Units of DNA for segregation 289.
Chromosome structure at interfaces between major chromatin types: alpha- and beta-heterochromatin 1.
Environmental stimuli and transcriptional activity generate transient changes in DNA torsional tension 125.
Nucleosome segregation – Divided opinions? 237.
Telomeres, telomerase and senescence 363.
The discovery (or rediscovery?) of the phenomenon of premature chromosome condensation 193.
The regulation of DNA repair during development 74.
The role of recombinational hotspots in genome instability in mammalian cells 577.
Transvection and long distance gene regulation 409.
Chromosome walking
Short cuts for genomic walking: Chromosome microdissection and the polymerase chain reaction 245.
Chromosomal condensation
The discovery (or rediscovery?) of the phenomenon of premature chromosome condensation 193.
Clonal analysis
On the clonal origin of tumours 37.
C-*myc*
Proto-oncogenes in cell differentiation 22.
Cobalamin compounds
Inherited disorders of vitamin B_{12} utilization 331.
Perspectives on methylmalonic acidemia resulting from molecular cloning of methylmalonyl CoA mutase 335.
Commitment
Cell division phenotype and commitment: The evidence from *Drosophila* 34.
C-*src*
Proto-oncogenes in cell differentiation 22.
Cuticular sclerotization
Phylogenetic distribution and function of arylalkylamine *N*-acetyltransferase 30.
Cytochrome P450 proteins
Multiple mechanisms in the regulation of ethanol-inducible cytochrome P45011E1 429.
Cytogenetics
Chromosome structure at interfaces between major chromatin types: alpha- and beta-heterochromatin 1.
Cytoskeletal elements
The synapsins and the regulation of synaptic function 259.
Cytoskeleton
From the structure to the function of villin, an actin-binding protein of the brush border 403.
Determination
Determination of cell fate in sea urchin embryos 115.
Development
Metaphors and the role of genes in development 441.
Dictyostelium discoideum
Cell–cell adhesion molecules in *Dictyostelium* 357.
Differentiation
Proto-oncogenes in cell differentiation 22.
The regulation of DNA repair during development 74.
DNA binding proteins
The emerging structure of the *Agrobacterium* T-DNA transfer complex 103.
DNA heteroduplexes
The history of the DNA heteroduplex 133.
DNA methylation
Unbalanced transmethylation and the perturbation of the differentiated state leading to cancer 163.
DNA polymerase alpha
DNA polymerase delta: A second eukaryotic DNA replicase 231.
DNA polymerase epsilon: The latest member in the family of mammalian DNA polymerases 533.
DNA polymerase delta
DNA polymerase delta: A second eukaryotic DNA replicase 231.
DNA polymerase epsilon: The latest member in the family of mammalian DNA polymerases 533.
DNA polymerase epsilon
DNA polymerase delta: A second eukaryotic DNA replicase 231.
DNA polymerase epsilon: The latest member in the family of mammalian DNA polymerases 533.
DNA rearrangements
The role of recombinational hotspots in genome instability in mammalian cells 577.
DNA repair
The regulation of DNA repair during development 74.
DNA replication
Cloning with φ80lac: The French connection 503.
DNA polymerase delta: A second eukaryotic DNA replicase 231.
DNA polymerase epsilon: The latest member in the family of mammalian DNA polymerases 533.
Nucleosome segregation – Divided opinions? 237.
Telomeres, telomerase and senescence 363.
The organization of replication centres in higher eukaryotes 87.
Yeast as a model system for understanding the control of DNA replication in eukaryotes 457.
DNA-sequencing
Scanning tunnelling microscopy of DNA 131.
DNA supercoiling
Topoisomerase II can relax; novobiocin is a mitochondrial poison after all 493.
DNA torsional tension
Environmental stimuli and transcriptional activity generate transient changes in DNA torsional tension 125.

SUBJECT INDEX

DNA transfer
The emerging structure of the *Agrobacterium* T-DNA transfer complex 103.
DNA tumor viruses
Tumor suppressor genes 61.
Dopamine
Phylogenetic distribution and function of arylalkylamine *N*-acetyltransferase 30.
Dosage compensation
X-linked gene expression and sex determination in *Caenorhabditis elegans* 513.
Down syndrome
S100 protein and Down Syndrome 381.
Drosophila
Cell division phenotype and commitment: The evidence from *Drosophila* 34.
Cell type-specific enhancement in the *Drosophila* embryo by consensus homoeodomain binding sites 537.
Chromosome structure at interfaces between major chromatin types: alpha- and beta-heterochromatin 1.
Dissecting the complexity of the nervous system by enhancer detection 199.
From gene to phenotype in *Drosophila* and other organisms 297.
Genomic finger printing goes simple 44.
Pattern formation in plants and animals 607.
Puffs and gene regulation – molecular insights into the *Drosophila* ecdysone regulatory hierarchy 561.
Telomeres, telomerase and senescence 363.
Transcriptional regulation of the *Drosophila* segmentation gene *fushi tarazu (ftz)* 109.
Transvection and long distance gene regulation 409.
X-linked gene expression and sex determination in *Caenorhabditis elegans* 513.
***ebg* operon**
Directed evolution of a bacterial operon 551.
Ecdysone
Puffs and gene regulation – molecular insights into the *Drosophila* ecdysone regulatory hierarchy 561.
Embryogenesis
At the crossroads of developmental genetics: the cloning of the classical mouse T locus 377.
Cellular and genetic responses to mesoderm induction in *Xenopus* 465.
Determination of cell fate in sea urchin embryos 115.
Genetic control of cell communication in *C. elegans* development 265.
Glycoconjugate expression during embryogenesis and its biological significance 173.
Retinoic acid: The morphogen of the main body axis? 437.
Transcriptional regulation of the *Drosophila* segmentation gene *fushi tarazu (ftz)* 109.
Endoplasmic reticulum (ER)
Defining components required for transport from the ER to the Golgi complex in yeast 485.
Golgi complex beads and the transition region 495.
Molecular machinery required for protein transport from the endoplasmic reticulum to the Golgi complex 253.
Targeting of proteins into the eukaryotic secretory pathway: Signal peptide structure–function relationships 479.
The endoplasmic reticulum and calcium storage 527.
Enhancers
Dissecting the complexity of the nervous system by enhancer detection 199.
Promoter choice within a gene cluster: A switch of loyalties 283.
Enzyme activity regulation
Enzyme activities in bondage 98.
Enzymes, structural roles of
Enzyme activities in bondage 98.
Epigenetic states
Position effects, methylation and inherited epigenetic states 385.
Epithelial cells
Cell polarity and development of the first epithelium 67.
ER to Golgi transport
Defining components required for transport from the ER to the Golgi complex in yeast 485.
Golgi complex beads and the transition region 495.
Molecular machinery required for protein transport from the endoplasmic reticulum to the Golgi complex 253.
Erythrocytes
Induction of a phosphomannosyl binding lectin activity in *Giardia* 211.
Escherichia coli
From cell membrane to nucleotides. The phosphate regulon in *Escherichia coli* 371.
The isolation of the *lac* repressor 41.
Eukaryotic transcription factors
Eukaryotic transcription factors 205.
Evolution
Directed evolution of a bacterial operon 551.
Position effects, methylation and inherited epigenetic states 385.
The fifth day of creation 303.
Excision repair
The regulation of DNA repair during development 74.
Fibrillarin
Functional and dynamic aspects of the mammalian nucleolus 14.
Functional redundancy
Multistep emancipation of tumors from growth control: can it be curbed in a single step? 347.
The functional importance of multiple actin isoforms 309.
Fushi tarazu (ftz)
Cell type-specific enhancement in the *Drosophila* embryo by consensus homoeodomain binding sites 537.
Transcriptional regulation of the *Drosophila* segmentation gene *fushi tarazu (ftz)* 109.
Gelsolin
Membranes and microfilaments: Interactions and role in cellular dynamics 90.
Gene conversion
The history of the DNA heteroduplex 133.
Gene engineering
Cloning with ϕ80lac: The French connection 503.
Perspectives on methylmalonic acidemia resulting from molecular cloning of methylmalonyl CoA mutase 335.
Gene families
Calmodulin-dependent protein kinase II 27.
Gene structure
The history of the DNA heteroduplex 133.
Gene targeting
Plant gene replacement – a natural approach 597.

Genetic background effects
Position effects, methylation and inherited epigenetic states 385.
Genetic chimaeras
On the clonal origin of tumours 37.
Genetic code
A case of sickle-cell anaemia: A commentary 397.
Genetic defects
Inherited disorders of vitamin B_{12} utilization 331.
Perspectives on methylmalonic acidemia resulting from molecular cloning of methylmalonyl CoA mutase 335.
Genetic material, RNA as
Virus reconstitution and the proof of the existence of genomic RNA 351.
Genetic recombination
Plant gene replacement – a natural approach 597.
The role of recombinational hotspots in genome instability in mammalian cells 577.
Genome instability
The role of recombinational hotspots in genome instability in mammalian cells 577.
Genomic fingerprinting
Genomic finger printing goes simple 44.
Giardia lamblia
Induction of a phosphomannosyl binding lectin activity in *Giardia* 211.
Glial cells
Cell adhesion molecules and ion pumps – do ion fluxes regulate neuronal migration? 287.
The cellular and molecular events of central nervous system remyelination 569.
Glial proteins
S100 protein and Down Syndrome 381.
glp-1
Genetic control of cell communication in *C. elegans* development 265.
Glycolipid antigens
Glycoconjugate expression during embryogenesis and its biological significance 173.
Glycoproteins
Cell–cell adhesion molecules in *Dictyostelium* 357.
Self-incompatibility in flowering plants 155.
Structure and function of the nuclear pore complex: New perspectives 323.
Golgi complex
Defining components required for transport from the ER to the Golgi complex in yeast 485.
Golgi complex beads and the transition region 495.
Golgi complex beadtransport from the endoplasmic reticulum to the Golgi complex 253.
Molecular machinery required for protein transport from the endoplasmic reticulum to the Golgi complex 253.
Growth factor receptors
Proto-oncogenes in cell differentiation 22.
Growth hormone
Regulation of cell-type-specific transcription and differentiation of the pituitary 80.
Growth regulation
Growth-related protein kinases 121.
GTP-binding proteins
Molecular machinery required for protein transport from the endoplasmic reticulum to the Golgi complex 253.
Hemoglobin genes
A case of sickle-cell anaemia: A commentary 397.
Promoter choice within a gene cluster: A switch of loyalties 283.
Heterochromatin
Chromosome structure at interfaces between major chromatin types: alpha- and beta-heterochromatin 1.
Heterokaryons
Mating type and mating strategies in *Neurospora* 53.
Holliday junctions
Processing of recombination intermediates *in vitro* 151.
The history of the DNA heteroduplex 133.
Homeobox genes
Cell type-specific enhancement in the *Drosophila* embryo by consensus homoeodomain binding sites 537.
Regional neural induction in *Xenopus laevis* 591.
HTLV-1
Discovery of the nucleolar targeting signal 143.
Hypersensitive sites
Promoter choice within a gene cluster: A switch of loyalties 283.
Immune surveillance
Two-way signalling through LFA-1 lymphocyte adhesion receptors 421.
***In vitro* translation**
Baker's yeast, the new work horse in protein synthesis studies: Analyzing eukaryotic translation initiation 519.
Inflammation
Expression of human plasma protein genes in ageing transgenic mice 317.
Initiation factors
Baker's yeast, the new work horse in protein synthesis studies: Analyzing eukaryotic translation initiation 519.
Inositol 1,4,5-trisphosphate
The endoplasmic reticulum and calcium storage 527.
Integrins
Integrins and tumor invasion 583.
Two-way signalling through LFA-1 lymphocyte adhesion receptors 421.
Intestinal epithelium
On the clonal origin of tumours 37.
Intracellular signalling
The endoplasmic reticulum and calcium storage 527.
Involucrin
Remodelling the involucrin gene and why we are not chimps 241.
Ion channels
Genetic dissection of Ca^{2+}-dependent ion channel function in *Paramecium* 273.
Ion fluxes
Cell adhesion molecules and ion pumps – do ion fluxes regulate neuronal migration? 287.
Cell polarity and development of the first epithelium 67.
Ionising radiation
Ionising radiations from nuclear establishments and childhood leukaemias – an enigma 541.
Kidney development
Traction and the formation of mesenchymal condensations *in vivo* 389.
Kirkegaard, Soren
Characterisation of engineered proteins: Some critical reflections 47.
***lac* operon**
Directed evolution of a bacterial operon 551.
The isolation of the *lac* repressor 41.

Lactosaminoglycans
Glycoconjugate expression during embryogenesis and its biological significance 173.
Lambda
Cloning with ϕ80lac: The French connection 503.
Lamins
Structure and function of the nuclear pore complex: New perspectives 323.
Lectins
Induction of a phosphomannosyl binding lectin activity in *Giardia* 211.
Leukaemogenesis
Ionising radiations from nuclear establishments and childhood leukaemias – an enigma 541.
LFA-1
Two-way signalling through LFA-1 lymphocyte adhesion receptors 421.
lin-12
Genetic control of cell communication in *C. elegans* development 265.
Looping
Transvection and long distance gene regulation 409.
Lymphocytes
Two-way signalling through LFA-1 lymphocyte adhesion receptors 421.
Lymphoma
Ionising radiations from nuclear establishments and childhood leukaemias – an enigma 541.
Mating type genetics
Mating type and mating strategies in *Neurospora* 53.
Matrix association regions (MARs)
Chromosome reproduction: Units of DNA for segregation 289.
DNA topoisomerase dysfunction: a new goal for antitumor therapy 167.
Mesenchymal condensations
Traction and the formation of mesenchymal condensations *in vivo* 389.
Mesoderm
Cellular and genetic responses to mesoderm induction in *Xenopus* 465.
Regional neural induction in *Xenopus laevis* 591.
Metabolism
Inherited disorders of vitamin B_{12} utilization 331.
Perspectives on methylmalonic acidemia resulting from molecular cloning of methylmalonyl CoA mutase 335.
Metaphors in development
Metaphors and the role of genes in development 441.
Metastasis
Integrins and tumor invasion 583.
Methionine-dependence
Unbalanced transmethylation and the perturbation of the differentiated state leading to cancer 163.
Methylation
Position effects, methylation and inherited epigenetic states 385.
Unbalanced transmethylation and the perturbation of the differentiated state leading to cancer 163.
Methylmalonyl CoA mutase
Inherited disorders of vitamin B_{12} utilization 331.
Perspectives on methylmalonic acidemia resulting from molecular cloning of methylmalonyl CoA mutase 335.
Microdissection
Short cuts for genomic walking: Chromosome microdissection and the polymerase chain reaction 245.
Microfilaments
Membranes and microfilaments: Interactions and role in cellular dynamics 90.
Microtubules
Calmodulin-dependent protein kinase II 27.
Mismatch repair
DNA polymerase epsilon: The latest member in the family of mammalian DNA polymerases 533.
Mismatch repair in mammalian cells 473.
Mitotic domains
Cell division phenotype and commitment: The evidence from *Drosophila* 34.
Molecular evolution
Conservation of RNA polymerase 343.
Directed evolution of a bacterial operon 551.
Remodelling the involucrin gene and why we are not chimps 241.
Monoclonal antibodies (MABs)
Molecular changes in carbohydrate antigens associated with cancer 223.
Morphogenesis
From the structure to the function of villin, an actin-binding protein of the brush border 403.
Traction and the formation of mesenchymal condensations *in vivo* 389.
Mouse development
At the crossroads of developmental genetics: the cloning of the classical mouse T locus 377.
Cell polarity and development of the first epithelium 67.
mRNA stabilization
Multiple mechanisms in the regulation of ethanol-inducible cytochrome P45011E1 429.
Multiple sclerosis
The cellular and molecular events of central nervous system remyelination 569.
Muscle cells
The functional importance of multiple actin isoforms 309.
Muscle development
Cellular and genetic responses to mesoderm induction in *Xenopus* 465.
Myofibril assembly 447.
Mutant selection
From gene to phenotype in *Drosophila* and other organisms 297.
Mycorrhiza
The biosynthetic potential of plant roots 7.
MyoD
Cellular and genetic responses to mesoderm induction in *Xenopus* 465.
Myosin
Myofibril assembly 447.
Na^+,K^+-ATPase
Cell adhesion molecules and ion pumps – do ion fluxes regulate neuronal migration? 287.
N-CAMs
Cell–cell adhesion molecules in *Dictyostelium* 357.
Traction and the formation of mesenchymal condensations *in vivo* 389.
Nervous system development
Cholinesterases preceding major tracts in vertebrate neurogenesis 415.

Dissecting the complexity of the nervous system by enhancer detection 199.
Regional neural induction in *Xenopus laevis* 591.
Neurospora crassa
Mating type and mating strategies in *Neurospora* 53.
Neurotransmitters
The synapsins and the regulation of synaptic function 259.
Nicotiana
Self-incompatibility in flowering plants 155.
Novobicin
Topoisomerase II can relax; novobiocin is a mitochondrial poison after all 493.
Nuclear pores
Structure and function of the nuclear pore complex: New perspectives 323.
Nuclear structure
The organization of replication centres in higher eukaryotes 87.
Nucleolar organisation
Functional and dynamic aspects of the mammalian nucleolus 14.
Nucleolar structure
Discovery of the nucleolar targeting signal 143.
Nucleolar targeting signal
Discovery of the nucleolar targeting signal 143.
Nucleoskeleton
The organization of replication centres in higher eukaryotes 87.
Nucleosomes
Nucleosome segregation – Divided opinions? 237.
Oligodendrocyte
The cellular and molecular events of central nervous system remyelination 569.
Oncogenes
Growth-related protein kinases 121.
Organelle biogenesis
Topogenesis of peroxisomal proteins 217.
Organelle morphogenesis
Golgi complex beads and the transition region 495.
OTF-2
Eukaryotic transcription factors 205.
Paramecium
Genetic dissection of Ca^{2+}-dependent ion channel function in *Paramecium* 273.
Pathways:biochemical
Directed evolution of a bacterial operon 551.
Pattern formation
Pattern formation in plants and animals 607.
The fifth day of creation 303.
PCNA
DNA polymerase delta: A second eukaryotic DNA replicase 231.
P-elements
Dissecting the complexity of the nervous system by enhancer detection 199.
Penicillin
Selective reminiscences of β-lactam antibiotics. Early research on penicillin and cephalosporins 601.
Peroxisomal proteins
Topogenesis of peroxisomal proteins 217.
Phosphate regulon
From cell membrane to nucleotides. The phosphate regulon in *Escherichia coli* 371.
Phytoalexin
The biosynthetic potential of plant roots 7.
Pituitary
Regulation of cell-type-specific transcription and differentiation of the pituitary 80.
Plant metabolism
The biosynthetic potential of plant roots 7.
Plasma protein genes
Expression of human plasma protein genes in ageing transgenic mice 317.
Pollination
Self-incompatibility in flowering plants 155.
Polymerase chain reaction (PCR)
From gene to phenotype in *Drosophila* and other organisms 297.
Genomic finger printing goes simple 44.
Proto-oncogenes in cell differentiation 22.
Short cuts for genomic walking: Chromosome microdissection and the polymerase chain reaction 245.
Polyphosphoinositides
Membranes and microfilaments: Interactions and role in cellular dynamics 90.
Polytene chromosomes
Puffs and gene regulation – molecular insights into the *Drosophila* ecdysone regulatory hierarchy 561.
Short cuts for genomic walking: Chromosome microdissection and the polymerase chain reaction 245.
Position effect
Position effects, methylation and inherited epigenetic states 385.
Transvection and long distance gene regulation 409.
Post-translational modification
Characterisation of engineered proteins: Some critical reflections 47.
POU domain
Regulation of cell-type-specific transcription and differentiation of the pituitary 80.
Primate evolution
Remodelling the involucrin gene and why we are not chimps 241.
Profilin
Membranes and microfilaments: Interactions and role in cellular dynamics 90.
The functional importance of multiple actin isoforms 309.
Prolactin
Regulation of cell-type-specific transcription and differentiation of the pituitary 80.
Promoters
Promoter choice within a gene cluster: A switch of loyalties 283.
Protein databases
Comprehensive, computerized 2D gel protein databases offer a global approach to the study of the mammalian cell 93.
Protein engineering
Characterisation of engineered proteins: Some critical reflections 47.
Protein kinases
Growth-related protein kinases 121.
Multiple mechanisms in the regulation of ethanol-inducible cytochrome P45011E1 429.

The synapsins and the regulation of synaptic function 259.
Protein phosphorylation
Growth-related protein kinases 121.
The discovery (or rediscovery?) of the phenomenon of premature chromosome condensation 193.
Protein structure
Calmodulin-dependent protein kinase II 27.
Characterisation of engineered proteins: Some critical reflections 47.
Conservation of RNA polymerase 343.
From the structure to the function of villin, an actin-binding protein of the brush border 403.
Protein transport
Structure and function of the nuclear pore complex: New perspectives 323.
Protein-DNA complexes
Processing of recombination intermediates *in vitro* 151.
Proteolysis
Targeting of proteins into the eukaryotic secretory pathway: Signal peptide structure–function relationships 479.
Proto-oncogenes
Proto-oncogenes in cell differentiation 22.
p53 gene/protein
Multistep emancipation of tumors from growth control: can it be curbed in a single step? 347.
Tumor suppressor genes 61.
Radiation dose
Ionising radiations from nuclear establishments and childhood leukaemias – an enigma 541.
RecA protein
Processing of recombination intermediates *in vitro* 151.
Receptor kinase
A membrane receptor kinase that regulates development in *Bacillus subtilis* 387.
Recognition systems
Glycoconjugate expression during embryogenesis and its biological significance 173.
Induction of a phosphomannosyl binding lectin activity in *Giardia* 211.
Molecular changes in carbohydrate antigens associated with cancer 223.
Self-incompatibility in flowering plants 155.
Recombination
Mating type and mating strategies in *Neurospora* 53.
Processing of recombination intermediates *in vitro* 151.
The history of the DNA heteroduplex 133.
Regulatory hierarchy
Puffs and gene regulation – molecular insights into the *Drosophila* ecdysone regulatory hierarchy 561.
Remyelination
The cellular and molecular events of central nervous system remyelination 569.
Repetitive sequences
Remodelling the involucrin gene and why we are not chimps 241.
Retinoblastoma
Multistep emancipation of tumors from growth control: can it be curbed in a single step? 347.
Tumor suppressor genes 61.
Retinoic acid
Retinoic acid: The morphogen of the main body axis? 437.
Ribosomal RNA synthesis
Functional and dynamic aspects of the mammalian nucleolus 14.
RNA helicases
Baker's yeast, the new work horse in protein synthesis studies: Analyzing eukaryotic translation initiation 519.
RNA polymerases
Conservation of RNA polymerase 343.
Functional and dynamic aspects of the mammalian nucleolus 14.
RNA transport
Structure and function of the nuclear pore complex: New perspectives 323.
RNA viruses
Virus reconstitution and the proof of the existence of genomic RNA 351.
Root culture
The biosynthetic potential of plant roots 7.
Saccharomyces cerevisiae
Baker's yeast, the new work horse in protein synthesis studies: Analyzing eukaryotic translation initiation 519.
Defining components required for transport from the ER to the Golgi complex in yeast 485.
Mating type and mating strategies in *Neurospora* 53.
Molecular machinery required for protein transport from the endoplasmic reticulum to the Golgi complex 253.
Yeast as a model system for understanding the control of DNA replication in eukaryotes 457.
Scanning tunneling microscopy
Scanning tunneling microscopy of DNA 131.
Schizosaccharomyces pombe
Yeast as a model system for understanding the control of DNA replication in eukaryotes 457.
Sea urchin
Determination of cell fate in sea urchin embryos 115.
The sea urchin spermatozoon 449.
Secretory mutants
Molecular machinery required for protein transport from the endoplasmic reticulum to the Golgi complex 253.
Segmentation
Transcriptional regulation of the *Drosophila* segmentation gene *fushi tarazu (ftz)* 109.
Self-incompatibility
Self-incompatibility in flowering plants 155.
Senescence
Telomeres, telomerase and senescence 363.
Sequences, simple
Genomic finger printing goes simple 44.
Serotonin
Phylogenetic distribution and function of arylalkylamine *N*-acetyltransferase 30.
Sex determination
X-linked gene expression and sex determination in *Caenorhabditis elegans* 513.
Sickle-cell anaemia
A case of sickle-cell anaemia: A commentary 397.
Signal peptides
Targeting of proteins into the eukaryotic secretory pathway: Signal peptide structure–function relationships 479.
Signal transduction
A membrane receptor kinase that regulates development in *Bacillus subtilis* 387.
From cell membrane to nucleotides. The phosphate regulon in *Escherichia coli* 371.

Two-way signalling through LFA-1 lymphocyte adhesion receptors 421.
Simian virus (SV) 40
Tumor suppressor genes 60.
Sister chromatid exchange
Chromosome reproduction: Units of DNA for segregation 289.
Somitogenesis
Traction and the formation of mesenchymal condensations *in vivo* 389.
Spermatozoa
The sea urchin spermatozoon 449.
Splicing, differential
Calmodulin-dependent protein kinase II 27.
Expression of human plasma protein genes in ageing transgenic mice 317.
Sporulation
A membrane receptor kinase that regulates development in *Bacillus subtilis* 387.
START
Yeast as a model system for understanding the control of DNA replication in eukaryotes 457.
string (Stg)
Cell division phenotype and commitment: The evidence from *Drosophila* 34.
Synapsins
The synapsins and the regulation of synaptic function 259.
S100 protein
S100 protein and Down Syndrome 381.
T locus
At the crossroads of developmental genetics: the cloning of the classical mouse T locus 377.
Taglin
Induction of a phosphomannosyl binding lectin activity in *Giardia* 211.
Targeting signals
Discovery of the nucleolar targeting signal 143.
Targeting of proteins into the eukaryotic secretory pathway: signal peptide structure–function relationships 479.
Topogenesis of peroxisomal proteins 217.
T-DNA
Plant gene replacement – a natural approach 597.
The emerging structure of the *Agrobacterium* T-DNA transfer complex 103.
Telomeres
Telomeres, telomerase and senescence 363.
TGF-β
Cellular and genetic responses to mesoderm induction in *Xenopus* 465.
Tobacco mosaic virus (TMV)
Virus reconstitution and the proof of the existence of genomic RNA 351.
Topoisomerase II
Topoisomerase II can relax; novobiocin is a mitochondrial poison after all 493.
Topoisomerases
DNA topoisomerase dysfunction: a new goal for antitumor therapy 167.
Traction
Traction and the formation of mesenchymal condensations *in vivo* 389.
Transcriptional regulation
Cell type-specific enhancement in the *Drosophila* embryo by consensus homeodomain binding sites 537.
Environmental stimuli and transcriptional activity generate transient changes in DNA torsional tension 125.
Eukaryotic transcription factors 205.
Functional and dynamic aspects of the mammalian nucleolus 14.
Multiple mechanisms in the regulation of ethanol-inducible cytochrome P45011E1 429.
Promoter choice within a gene cluster: A switch of loyalties 283.
Proto-oncogenes in cell differentiation 22.
Puffs and gene regulation – molecular insights into the *Drosophila* ecdysone regulatory hierarchy 561.
Regulation of cell-type-specific transcription and differentiation of the pituitary 80.
The isolation of the *lac* repressor 41.
Transcriptional regulation of the *Drosophila* segmentation gene *fushi tarazu (ftz)* 109.
Transvection and long distance gene regulation 409.
Transferrin
Expression of human plasma protein genes in ageing transgenic mice 317.
Transformation
Tumor suppressor genes 61.
Translation
Baker's yeast, the new work horse in protein synthesis studies: Analyzing eukaryotic translation initiation 519.
Targeting of proteins into the eukaryotic secretory pathway: Signal peptide structure–function relationships 479.
Transvection
Transvection and long distance gene regulation 409.
Tumor suppressor genes
Tumor suppressor genes 61.
Unbalanced transmethylation and the perturbation of the differentiated state leading to cancer 163.
Tumorigenesis
Molecular changes in carbohydrate antigens associated with cancer 223.
Multistep emancipation of tumors from growth control: can it be curbed in a single step? 347.
On the clonal origin of tumours 37.
Integrins and tumor invasion 583.
Tyrosine kinase
Proto-oncogenes in cell differentiation 22.
Uvomorulin
Cell polarity and development of the first epithelium 67.
Glycoconjugate expression during embryogenesis and its biological significance 173.
Villin
From the structure to the function of villin, an actin-binding protein of the brush border 403.
Vitamin B_{12} metabolism
Inherited disorders of vitamin B_{12} utilization 331.
Perspectives on methylmalonic acidemia resulting from molecular cloning of methylmalonyl CoA mutase 335.
X chromosome
X-linked gene expression and sex determination in *Caenorhabditis elegans* 513.
Xenobiotics
Multiple mechanisms in the regulation of ethanol-inducible cytochrome P45011E1 429.

Xenopus laevis
Cellular and genetic responses to mesoderm induction in *Xenopus* 465.
Regional neural induction in *Xenopus laevis* 591.
Retinoic acid: The morphogen of the main body axis? 437.

YAC vectors
YAC Power 183.

Zeste
Transvection and long distance gene regulation 409.

Zinc finger proteins
Eukaryotic transcription factors 205.
